

The ChatGPT Book Commands Playbook

Four ChatGPT commands that turn any book into a mind map, sketchnotes, flashcards or a comic page, with copy-paste prompts for each.

Why I stopped reading business books the slow way

Agency owners and solopreneurs spend hours on business books they half remember a week later. Highlighting takes time, and note-taking sessions take more.

This guide covers four ChatGPT commands that change that. Drop a book into the chat, type one command, and get the core ideas in a format your brain actually retains.

It works for a business book, a marketing framework or an industry report. You absorb it in minutes instead of hours.

01

How it actually works

Every command starts from the same place: the book you dropped into the chat. What changes is the format that comes back.

1. Drop the book into ChatGPT.
2. Type one of the four commands: `/mindmap`, `/sketchnotes`, `/flashcards` or `/educationalcomics`.
3. Read or study what comes back, then run another command on the same book if you want a second format.

02

The one thing almost everyone gets wrong

Most people pick one format and use it for everything. The four commands exist because people retain information in different ways.

WATCH OUT

Match the command to how you learn. If you process information better visually, `/educationalcomics` or `/mindmap` will stick better than a wall of text. If you need to memorize points, use `/flashcards`.

The four commands and what each one builds

Here is what each command does, straight from the video.

COMMAND	WHAT CHATGPT BUILDS	BEST FOR
<code>/mindmap</code>	A mind map of the most important topics in the book	Seeing the big picture first
<code>/sketchnotes</code>	Handwritten-style summary notes	Quick review and skimming
<code>/flashcards</code>	Simple cards covering the key points	Memorizing ideas fast
<code>/educationalcomics</code>	The main idea as a visual comic page	Visual learners

Below is a prompt for each one. They are templates, so swap the bracketed parts for your own book and goal.

Copy-paste prompts

MAP THE WHOLE BOOK

`/mindmap`

Book: [BOOK TITLE]

Focus on the most important topics and how they connect.

HANDWRITTEN SUMMARY

`/sketchnotes`

Book: [BOOK TITLE]

Summarize the key ideas as handwritten-style notes I can review in a few minutes.

MEMORIZE THE KEY POINTS

`/flashcards`

Book: [BOOK TITLE]

Build simple cards for the key points so I can memorize them fast.

SEE THE MAIN IDEA

`/educationalcomics`

Book: [BOOK TITLE]

Turn the main idea into a visual comic page.

Set it up in ChatGPT

1. Open a new ChatGPT chat and drop in the book you want to read.
2. Type `/mindmap` and read the map first, so you know where each chapter fits.
3. Run `/sketchnotes` or `/flashcards` on the same book depending on whether you want to review or memorize.
4. Use `/educationalcomics` when you want the main idea as a single visual page.

QUICK TIPS

- Start with one book you actually plan to read this week, so you can check the output against what you remember.
- Run two commands on the same book. A mind map plus flashcards covers structure and memory.

05

Combinations worth running

A few combinations that cover the common reading goals.

BEFORE I READ

`/mindmap`

Book: [BOOK TITLE]

Show me the main topics so I know what to pay attention to.

AFTER I READ

`/flashcards`

Book: [BOOK TITLE]

Build cards for the key points from [CHAPTER OR TOPIC].

FOR A CLIENT FRAMEWORK

`/sketchnotes`

Document: [FRAMEWORK OR REPORT NAME]

Summarize it as handwritten-style notes I can reference on a client call.

When the result is off

PROBLEM	FIX
The mind map misses a topic you care about	Run /mindmap again and name the topic in your message so it gets its own branch.
The notes feel too broad	Say which chapter or section you want, then run the command again.
The flashcards cover too much	Ask for cards on one chapter at a time.
The comic page does not land the idea	State the single main idea in your own words and run /educationalcomics again.

Ready to go deeper?

This playbook is the short version. Inside the hub you get the full build walkthroughs, the prompt library, and the systems I use to ship this in a weekend.
