

The Vox Animation Playbook

Your 3-Step Free System for Viral Archived-Photo Animations

01

Write the Script + Image Prompts

Feed a free AI chatbot (Claude, DeepSeek, or ChatGPT) one master prompt and it returns your full script, broken into visual beats, plus a ready-to-use image prompt for every beat.

QUICK TIPS

- Claude holds the beat-by-beat structure most cleanly — start there
- Keep beats to one idea each, sized to 3-5 seconds of narration

02

Batch-Generate Every Image With ZapiFlow

Install the free ZapiFlow Chrome extension, paste in your image prompt file, and it queues every image through Google Flow automatically while you step away — no manual submitting, no babysitting.

QUICK TIPS

- Run this while you write your next script — it's fully unattended
- Double-check the prompt file for any leftover placeholder text before batching

03

Animate With One Universal Motion Prompt

Apply the same motion prompt to every generated image so the whole video shares one consistent push-in, parallax, and pop-out rhythm — this is what makes the finished video feel intentional instead of like a slideshow.

QUICK TIPS

- Never mix motion prompts within one video — consistency sells the format
- Test the motion prompt on one image first before running the full batch

The Master Prompt Template

Paste this into your free chatbot of choice, replacing the bracketed topic, and it returns the script, beats, and image prompt file in one pass.

PASTE THIS

Write a 40-second Vox-style explainer script about [TOPIC]. Break it into numbered visual beats (one idea per beat). For each beat, write a detailed image prompt for an archived-photo pop-out style AI image: old black-and-white portrait style, red outline, subtle bounce, stamped label. Output as: Beat 1 – script line – image prompt, Beat 2 – script line – image prompt, etc.

Ready to go deeper?

This playbook is the short version. Inside the hub you get the full build walkthroughs, the prompt library, and the systems I use to ship this in a weekend.
