

3 Claude Finance Agents, Set Up Right

The exact install steps and commands for the Market Researcher, Model Builder, and Earnings Reviewer agents from Anthropic's financial-services repo.

Why I built this

I kept watching people try to research stocks the slow way: ten browser tabs for news, a blank spreadsheet for the model, and a replay of the earnings call at 1.5x speed hoping to catch the one sentence that mattered. Claude's financial-services repo already solves this with three agents that split the work up. The video shows what they do. This guide is the part that actually gets them running on your machine.

One thing up front: these agents draft analyst work product for a human to review. They don't place trades, give investment advice, or approve anything on their own. You're still the one reading the output and deciding what to do with it.

01

How it actually works

1. The Market Researcher agent takes a sector or a single ticker and pulls the latest news, analyst ratings, and company announcements automatically, then returns an industry overview, a competitive landscape, peer comps, and a shortlist of ideas worth looking at further.
2. The Model Builder agent takes a company and builds a full financial model live in Excel, estimates what the business is worth, and breaks down the risks behind that number. It runs on the same skill set behind the repo's `/dcf`, `/lbo`, and `/3-statement-model` commands.
3. The Earnings Reviewer agent takes an earnings call transcript plus the related filing and breaks down what management actually said, so you can check whether your original thesis still holds. It's built on the same skill behind the repo's `/earnings` command.

02

The one thing almost everyone gets wrong

People install the named agent and skip the core skills plugin underneath it, then wonder why the commands don't resolve.

WATCH OUT

The financial-analysis plugin has to be installed before any named agent (market-researcher, pitch-agent, gl-reconciler, and so on). It carries the shared skills and the MCP data connectors the agents call. Installing an agent without it is the single most common reason a command fails on first run.

SOURCE CODE

The full repo, open source under Apache 2.0:

<https://github.com/anthropics/financial-services>

INSTALL ORDER

```
claude plugin marketplace add anthropics/financial-services
claude plugin install financial-analysis@claude-for-financial-services
claude plugin install market-researcher@claude-for-financial-services
```

SKILL COMMANDS THESE AGENTS RUN ON

/dcf	DCF valuation with WACC sensitivity
/lbo	Leveraged buyout model
/3-statement-model	3-statement financial model
/earnings	Post-earnings quarterly update report
/earnings-preview	Pre-earnings scenario analysis
/model-update	Update an existing model with new data

SITES SHOWN IN THE VIDEO

<https://github.com/anthropics/financial-services>

Set it up in Claude Code or Codex

1. In Claude Code: run `claude plugin marketplace add anthropics/financial-services` first. This registers the repo as a plugin source, it doesn't install anything yet.
2. Install the core skills plugin before any named agent: `claude plugin install financial-analysis@claude-for-financial-services`. This carries the shared skills and the `.mcp.json` data connector config every agent depends on.
3. Install the specific agent you want by name, for example `claude plugin install market-researcher@claude-for-financial-services`, or `pitch-agent`, `gl-reconciler`, `meeting-prep-agent` for the others. You only need the agents you'll actually use.
4. If you'd rather not use the CLI, the same agents install with no code at all through Claude Cowork: Settings, then Plugins, then Add plugin, then paste the repo URL <https://github.com/anthropics/financial-services> and pick agents from the marketplace that opens.
5. Optional data connectors (Daloopa, FactSet, Morningstar, Moody's, LSEG, PitchBook) are listed in the financial-analysis plugin's `.mcp.json`. They need their own API key or subscription from the provider, so skip this step unless your firm already has access.
6. If you're deploying an agent as a standing service instead of running it in your own terminal, set your Anthropic API key first: ask Claude to add `ANTHROPIC_API_KEY` to your shell profile, then open a new terminal window so it loads, then run `scripts/deploy-managed-agent.sh` from inside the cloned repo.
7. Run your first command against a real ticker, something like asking the market-researcher agent to research a company you already know well. If it returns an industry overview with peer comps and a shortlist instead of an error about a missing skill, the install worked.

QUICK TIPS

- Install only the vertical plugin for the work you actually do: equity-research for earnings and coverage work, investment-banking for pitch decks and CIMs, private-equity for deal screening and IC memos. You don't need all of them.

04

The commands I actually run

KICK OFF MARKET RESEARCH

Use the market-researcher agent to research [TICKER OR COMPANY NAME]. Pull the latest news, analyst ratings, and any recent company announcements, and give me the competitive landscape plus peer comps.

BUILD A VALUATION MODEL

Use the model-builder agent to build a full valuation model for [COMPANY NAME]. Estimate what the business is worth and break down the key risks behind that number.

REVIEW AN EARNINGS CALL

Use the earnings-reviewer agent on this transcript and filing: [PASTE TRANSCRIPT OR ATTACH FILE]. Tell me what management actually said and whether it changes the thesis I described here: [YOUR CURRENT THESIS].

UPDATE AN EXISTING MODEL

Run `/model-update` on [MODEL FILE] using the new data in [SOURCE, e.g. latest 10-Q or earnings release].

When it breaks

ERROR	FIX
Command not found / skill not recognized	You installed a named agent without first installing <code>financial-analysis@claude-for-financial-services</code> . Install that one first.
Data connector times out or returns nothing	The MCP connector (Daloopa, FactSet, Morningstar, etc.) needs its own API key from that provider. Check <code>.mcp.json</code> and confirm the key is set, or skip the connector and let the agent work from public filings instead.
Plugin install says marketplace not found	Run <code>claude plugin marketplace add anthropics/financial-services</code> again before the install command. The marketplace has to be added in the same session or a persisted config.
Excel model opens with broken links or #REF errors	Re-run the model-builder agent rather than editing the generated file by hand first. The <code>audit-xls</code> skill (<code>/debug-model</code>) traces formula errors if you need to find the break before rebuilding.
Managed Agents deploy script fails with an auth error	<code>ANTHROPIC_API_KEY</code> isn't set in the terminal session. Ask Claude to add it to your shell profile, then open a new terminal so the variable loads before running <code>deploy-managed-agent.sh</code> again.

Ready to go deeper?

This playbook is the short version. Inside the hub you get the full build walkthroughs, the prompt library, and the systems I use to ship this in a weekend.
