Carousel Video Creator + App Builder Prompt Guide

Your 3-Section Cheat Sheet: Higgsfield MCP • Kie.ai • Reverse-Engineer \$1M Apps

01

Phase 1: Higgsfield MCP — AI Video Inside Claude Code

Higgsfield is an AI video generation platform with an MCP server that lets Claude Code call it directly — no switching tabs, no copy-paste. Add it once and generate cinematic clips straight from your terminal.

💡 QUICK TIPS

- Setup: Open Claude Code settings → Add MCP server → higgsfield.ai/mcp → Restart Claude Code
- Prompt: "Use Higgsfield to generate a cinematic talking-head intro: dark studio, purple rim lighting, slow push-in, 5 seconds"
- Prompt: "Create a B-roll clip: aerial cityscape at night, neon reflections on wet pavement, slow pan, 6 seconds"
- Prompt: "Animate this still image into a looping cinemagraph: subtle fog movement, 4 seconds"

02

Phase 2: Kie.ai — The Cheaper Alternative

Kie.ai (redpandaai.co) offers AI video generation and image-to-video at a fraction of Higgsfield costs. Perfect for creators who need volume without blowing the budget.

💡 QUICK TIPS

- Setup: Get API key from kie.ai → Add KIE_API_KEY to your .env → Use upload_file() in Claude Code
- Prompt: "Animate this product photo with a subtle zoom and lens flare — 3 seconds, seamless loop"
- Prompt: "Turn this screenshot into a parallax video: foreground moves faster than background, 4 seconds"
- Prompt: "Add motion blur and camera shake to simulate a handheld documentary style"

Phase 3: Reverse-Engineer Any \$1M App Store App

Instead of hiring a dev team, screenshot any top App Store app and let Claude Code analyze and rebuild it. This 5-step process turns screenshots into a working app scaffold — no coding background needed.

💡 QUICK TIPS

- Step 1 — Pick your target: App Store → Top Charts → 4.5+ stars, 10K+ reviews
- Step 2 — Screenshot: onboarding, dashboard, key features, paywall, settings
- Reverse-engineer prompt: "Analyze these screenshots of [App Name]. Give me: (1) top 5 features to clone, (2) recommended tech stack, (3) project folder structure, (4) first file to create."
- Build prompt: "Based on your analysis, scaffold the full project. Use [tech stack Claude recommended]. Build [Feature 1] first with full styling matching the app."
- Iterate: paste next screenshot → "Build this screen exactly as shown. Match layout, spacing, and interactions."
- Pro tip: Add CLAUDE.md with your brand colors before starting — Claude uses them on every screen.
